Hospital Safety Assessment

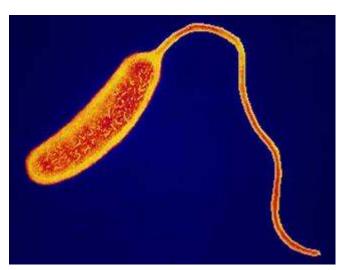

High Priority Safety Indicators

NON-STRUCTURAL Safety Level

- Water Supply
 - 43% of hospitals have LESS than a 24 hours supply of water

Cholera preparedness Diarrhea preparedness DFID Department for International Development

Coordination: Clusters and sub-clusters

Plans improved: Multi-hazard

Training: Public and private sector

Community aware: Vulnerable groups

Supplies on time: Sub-regional stocks

Teams responded: Simulations and deployments

Vulnerability mapping

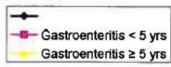

Diarrhea outbreak vulnerability criteria

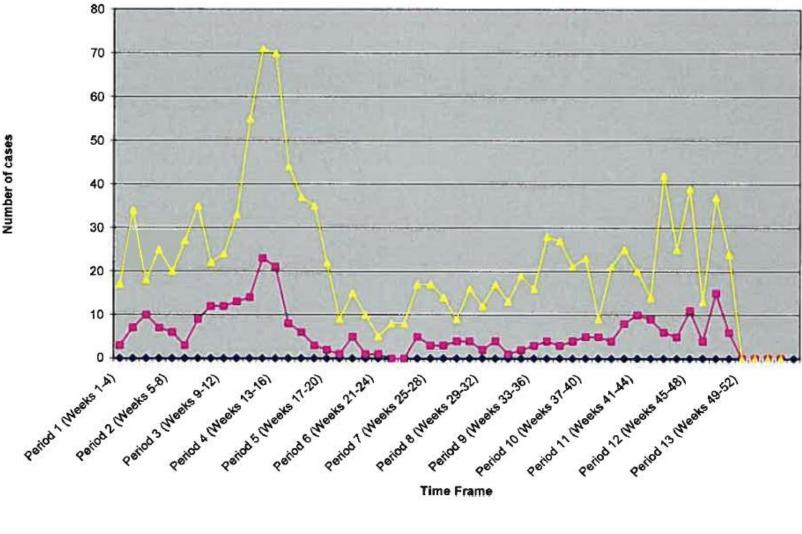

+

- Populations under the poverty level with poor access to water and improved hygiene + as well as long referral time to public health facilities
- Populations that suffered recent diarrheal disease outbreaks, e.g. typhoid fever
- Urban crowded slums with under-supervised food markets
- Places recently affected by natural disasters and pending recovery of the WASH (Water, Sanitation and Hygiene) sector
- Remote indigenous and rural populations seeking traditional healers as first line of treatment
- Pockets of legal and illegal immigrants living precariously
- Areas with high prevalence of people living with HIV/AIDS
