

# HEPATITIS.

## TIME TO TEST. TIME TO TREAT. TIME TO CURE.

### HEPATITIS ATTACKS THE MOST VULNERABLE

Over 90% of new hepatitis B infections occur through mother-to-child transmission and during early childhood. But other groups are also at higher risk of both hepatitis B and C, including people who inject drugs; men who have sex with men; people who have had tattoos or acupuncture; partners of people living with hepatitis B; and health care workers.
