PLAN OF ACTION FOR THE PREVENTION OF OBESITY IN CHILDREN AND ADOLESCENTS

Introduction

1. Obesity among children and adolescents has reached epidemic proportions in the Americas.\textsuperscript{1,2} Even if the causes of this epidemic are complex and more research is needed, much is known about the consequences and actions that must be undertaken to halt it. Over the past decade, many countries in the Region, have been putting some of those actions into place and it is now time for the Pan American Health Organization (PAHO) to take the leadership role by unifying these efforts and supporting Member States by launching a regional public health initiative.

2. This document provides Member States with the rationale and key strategic lines of action for comprehensive public health interventions to halt the progression of the obesity epidemic in children and adolescents. To that end, this five-year plan sets a goal and proposes five areas of action, including objectives and indicators. Each Member State, as a sovereign entity, may implement policies and regulations proposed in this Plan of Action according to its national needs and objectives.

\textsuperscript{1} Birth to age 4 (http://www.who.int/childgrowth/en/):
\begin{itemize}
  \item Overweight: weight-for-height z-score >= 2 SD and < 3 SD
  \item Obese: weight-for-height z-score >= 3 SD
  \item Overweight/obese combined: weight-for-height z-score >= 2 SD
\end{itemize}

\textsuperscript{2} Ages 5 to 19 (http://www.who.int/growthref/growthref_who_bull.pdf):
\begin{itemize}
  \item Overweight: BMI >= 1 SD and < 2 above the WHO growth standard median
  \item Obese: body mass index (BMI) >= 2 SD above the WHO growth standard median
  \item Overweight/obese combined: body mass index (BMI) >= 1 above the WHO growth standard median
\end{itemize}

The following WHO definition of children and adolescents is used in this Plan of Action: children: 0 to 9 years of age; adolescents: 10 to 19 years of age (www.who.int/topics/adolescent_health/en/).
Background

3. Authoritative publications, particularly from the World Health Organization (WHO), the Food and Agriculture Organization (FAO), and the World Cancer Research Fund (1, 2) agree that the most important factors that promote weight gain and obesity, as well as associated noncommunicable diseases (NCDs), are: a) high intake of products poor in nutrients and high in sugar, fat, and salt (herewith referred as energy-dense nutrient-poor products), such as salty or sugary snacks and fast foods; b) routine intake of sugar-sweetened beverages; and c) insufficient physical activity. These are all part of an obesogenic environment.

4. Physical activity plays an important role in the prevention of obesity, and the levels need to be sufficiently high to counteract excess energy intake. Therefore, preventive efforts should focus on healthy eating and the promotion of physical activity (3).

5. The effect of added sugars on health has been the subject of much scientific scrutiny in recent years. Meta-analyses of longitudinal studies (4) and randomized controlled trials (5) have shown positive associations between the consumption of added sugar and weight gain. In addition, the consumption of sugar-sweetened beverages is strongly associated with cardiovascular disease (6), type 2 diabetes, and metabolic syndrome (7). The physiological mechanisms include, among others, hyperinsulinemia, insulin resistance, atherosclerosis, and hypertension (8, 9). It has been suggested that the sugar component causing these physiological changes is fructose (10).

6. Reducing the consumption of added sugars is instrumental in preventing serious damage to the population’s health, but it is clearly not enough in itself. A healthy diet should be based on the daily consumption of fruit and vegetables, unrefined grains, pulses, milk, lean proteins including fish, and vegetable oils, with low consumption of red and processed meats (11, 12). Ensuring year-round availability, affordability, and access to foods consistent with such a diet requires strong and enabling agriculture and food systems (13, 14). Since natural and whole foods are the mainstay of traditional cuisines in the Americas, these very traditions can be a valuable instrument for promoting healthy eating (15).

7. Identifying the drivers of the obesity epidemic is critical to informing and developing sound policies, actions, and health-related laws and regulations. From a dietary perspective, it is now recognized that the individual’s food preferences, purchasing decisions, and eating behaviors are shaped by price, marketing, availability, and affordability. These factors are in turn influenced by upstream policies and regulations on trade and agriculture (16).

---

3 Obesogenic environment is an environment that promotes and supports obesity in individuals or populations through physical, economic, legislative and sociocultural factors.
8. A salient current commercial trend associated with the obesity epidemic is the ubiquitous availability and increase in per capita consumption of energy-dense nutrient-poor products and sugar-sweetened beverages in low- and middle-income countries. Consumption of energy-dense nutrient-poor products is five times higher, and of sodas, nearly three times higher compared with developed countries, where consumption is currently reaching market saturation levels (17, 18). The portion sizes of soda and other marketed products have also risen dramatically over recent decades. Advertising of energy-dense nutrient-poor products and sugar-sweetened beverages to children and adolescents has increased in the Region, influencing their food preferences, purchase requests, and eating patterns (19).

9. Similarly, opportunities for physical activity have suffered as a result of urban planning approaches that do not facilitate such activity, as well as growing violence and the perception thereof (20, 21). Compounding the situation, electronic entertainment has been increasingly replacing recreational physical activity. Children’s screen time, which is an opportunity for food consumption and exposure to food advertising, has increased to three hours a day or more. In addition, many schools have reduced the time allotted for physical education.

10. This Plan of Action focuses on children and adolescents for a number of reasons. Firstly, breastfeeding may reduce the prevalence of overweight and obesity by about 10% (22). Breastfeeding can also help mothers to lose weight after pregnancy more quickly. Secondly, the earlier a person becomes overweight or obese, the greater is his or her risk of remaining overweight or obese at older ages (23). Thirdly, obesity has adverse health consequences at early stages of life, as it increases the risk of asthma, type-2 diabetes, sleep apnea, and cardiovascular diseases (24, 25). These conditions, in turn, affect growth and psychosocial development during adolescence (26) and eventually compromise quality of life and longevity (27). Fourthly, since dietary habits are formed early in life, the promotion and consumption of energy-dense nutrient-poor products, sugar-sweetened beverages, and fast foods in childhood interfere with the formation of healthy dietary habits (28, 29). Finally, children are unable to discern the persuasive intent of marketing, and advertising of foods and beverages of minimal nutritional value. Such promotional campaigns may raise ethical concerns and diminish children’s enjoyment of the highest attainable standard of health. A precedent for action has already been established in the International Code of Marketing of Breast-milk Substitutes (Code) (30).

11. A gender and equity approach is also warranted. In high-income countries, obesity tends to concentrate among the poor, whereas in low- and middle-income countries obesity is more prevalent in the affluent population. However, as gross national product increases, obesity spreads out to all strata. This phenomenon is most likely explained by the current non-discerning obesogenic environment. Adding to the complexity of the issue, adolescent girls are more affected by the obesity epidemic, especially in lower-economic strata (31, 32).

Situation Analysis

13. Worldwide obesity nearly doubled between 1980 and 2008. In comparison with other WHO Regions, the prevalence of overweight and obesity is highest in the Americas (62% for overweight in both sexes and 26% for obesity in adults over 20 years of age) (33). In three countries (Mexico, Chile and the United States) obesity and overweight now affect around 7 of every 10 adults (34, 35, 36).

14. An increase in the prevalence of overweight and obesity has also been observed in the Region’s children aged 0 to 5 years. For example, rates doubled in the Dominican Republic, from 2.2% in 1991 to 5.6% in 2007; rates rose from 1.5% in 1993 to 3% in 2008 in El Salvador; and they increased from 2.5% in 1992 to 3.2% in 2012 in Peru.5 Similarly, a recent report from seven Eastern Caribbean countries shows that between 2000 and 2010 the rates of overweight and obesity in children aged 0 to 4 years doubled from 7.4% in 2000 to 14.8% (37).

15. In adolescents of both sexes (12 to 19 years), obesity rates in the United States increased 20%, from 17.4% in 2003 to 20.5% in 2012 (38). Among adolescent girls (15 to 20 years), overweight and obesity rates have risen steadily over the last two decades—for example: in Bolivia, from 21.1% to 42.7%; in Guatemala, from 19.6% to 29.4%; and in Peru, from 22% to 28.5%.6

16. Available data show that overall 20% to 25% of the children under 19 years old are affected by overweight and obesity (39). In Latin America, 7% of the children under 5 years of age (3.8 million) are estimated to be overweight or obese (39). Among school-age children (6 to 11 years old), rates range from 15% (Peru) (40) to 34.4% (Mexico)

---

4 See Article 24 of the United Nations Convention on the Rights of the Child
(41), and among adolescents (12 to 19 years old), from 17% (Colombia) (41) to 35% (Mexico) (42). In the United States, 34.2% of children aged 6 to 11 years and 34.5% of adolescents aged 12 to 19 years are overweight or obese (38), while in Canada 32.8% of children 5 to 11 years old and 30.1% of the adolescents aged 12 to 17 years old are affected (44). However, recent data from the United States point to a significant decrease in obesity among children aged 2 to 5 years, from 14% in 2003-2004 to 8% in 2012-2013 (38). This decline might be attributed to such factors as increased breastfeeding rates and changes in food policies under the government’s Supplemental Nutrition Program for Women, Infants, and Children (WIC).

17. In response to this epidemic, many countries in the Americas have sought to change norms and adopted regulations. Among them are:

a) Legislation and national policies to promote breastfeeding as, for example, the Baby Friendly Hospital Initiative, implementation and monitoring of the Code, and protection of breastfeeding in the workplace have been introduced in many countries.

b) Taxation on sugar-sweetened beverages and energy-dense nutrient-poor products aimed at reducing consumption, in Mexico.7

c) New policies to improve the school food environment, particularly foods sold in schools, as in Brazil, Chile, Colombia, Costa Rica,8 Ecuador,9 Mexico,10 Peru, the United States, and Uruguay.

d) Regulations on food marketing to children, as in Brazil, Chile,11 and Peru.

e) Improvements in National School Feeding Programs, as in the case of Brazil, Mexico, and others. Brazil now requires that at least 70% of food provided to students be natural or minimally processed and that a minimum of 30% of the school budget be used to buy foods from local family farmers.

f) Front-of-package labeling that provides simple visual messages to connote various food characteristics, as in Ecuador.

g) National, provincial, and territorial framework to promote healthy weight, as in the case of Canada and the United States,12 which includes a multisectoral partnership approach.

11 Source: http://www.bcn.cl/leyfacil/recurs/etiquetado-de-alimentos
18. Some of the laws, and the regulations to execute them, have been challenged in the courts, delaying or halting their implementation. Often the development of regulatory mechanisms to implement the laws is a lengthy process, and in some instances the final results have been at odds with the spirit of the laws, thus weakening their implementation.

19. Changes at local, state, and federal levels in the United States in the past 5 to 10 years have modified and improved the nutritional profile of foods and beverages served and available in the school setting. Such changes may have helped to halt the rise of overweight and obesity rates in several states and may even have led to a small decrease in some jurisdictions (45). Moreover, improvements in the WIC program have been associated with reduced obesity rates among children in 18 states (46).

**Goal**

20. The overall goal of this Plan of Action is to halt the rise of the rapidly growing obesity epidemic in children and adolescents, so that there is no increase in current country prevalence rates. This goal requires a multisectoral life-course approach that is based on the social-ecological model (47) and focuses on transforming the current obesogenic environment into opportunities for increased intake of nutritious foods and improved physical activity. This will be accomplished by implementing a set of effective policies, laws, regulations, and interventions, which will take into account the priorities and context of Member States, in the following strategic lines of action:

a) primary health care and promotion of breastfeeding and healthy eating;
b) improvement of school food and physical activity environments;
c) fiscal policies and regulation of food marketing and labelling;
d) other multisectoral actions;
e) surveillance, research and evaluation.

21. To this end, PAHO will provide: a) evidence-based information for the development of policies and regulations; b) regional guidelines for preschool and school feeding programs; c) regional guidelines for foods and beverages sold in schools (also known as competitive foods); and d) support for the adoption of indicators of obesity. As part of the Plan’s implementation, PAHO will establish these guidelines, develop and maintain a database of nationally representative figures on overweight and obesity prevalence, as well as monitor activities related to the implementation of policies, laws, and programs in the Region.

---

13 “Competitive foods and beverages are those that are sold at school outside of and in competition with the federally reimbursable meal programs.” (Source: http://www.cde.ca.gov/ls/nu/he/compfoods.asp)
Strategic Line of Action 1: Primary health care and promotion of breastfeeding and healthy eating.

22. The main goal of primary health care (PHC) is to ensure equitable access to the services needed to realize the right to the enjoyment of the highest attainable standard of health and, as such, it has an important role on the prevention of obesity in children and adolescents and its long-term consequences. PHC service offers the opportunity to provide integrated health services, including the promotion of breastfeeding, healthy dietary habits and physical activity (48). A longer period of breastfeeding may reduce the prevalence of overweight and obesity by about 10% (22). Exclusive breastfeeding also helps mothers to lose weight postpartum more quickly. Promotion of breastfeeding will require countries to strengthen PHC services, as well as to renew their commitment to fully implement the Code and the Baby Friendly Hospital Initiative (BFHI) (49).

**Objective 1.1:** To include in health care services the promotion of healthy eating based on national food-based dietary guidelines as well as other activities related to the prevention of obesity.

**Indicator:**

1.1.1: Number of countries with primary health care services that have incorporated family-oriented obesity prevention activities, including promotion of healthy eating and physical activity.
(Baseline: 1. Target: 10)

**Objective 1.2:** To reinforce efforts to implement the Global Strategy for Infant and Young Child Feeding.

**Indicators:**

1.2.1: Number of countries that regularly (at least every three years) publish their results of monitoring of the Code’s implementation.
(Baseline: 5. Target: 15)

1.2.2: Number of countries that have at least 50% of maternity health services BFHI-certified.
(Baseline: 0. Target: 5)

Strategic Line of Action 2: Improvement of school nutrition and physical activity environments.

23. Current scientific evidence establishes the effectiveness of school-based interventions to change eating behavior and prevent overweight and obesity (50, 51) by providing nutrient-dense meals that meet the dietary needs of children and adolescents.

---

14 In this Plan of Action, the term “school” includes elementary, middle and high school.
For such programs to be successful, they need to be implemented using an approach that is both comprehensive and consistent with nutrition and food safety standards. In addition, the marketing and sale of energy-dense nutrient-poor products and sugar-sweetened beverages in schools needs to be regulated, and physical activity should be incorporated into school daily activities.

**Objective 2.1:** To ensure that national school feeding programs as well as the sale of foods and beverages in schools (“competitive foods”) comply with norms and/or regulations that promote the consumption of healthy foods and water and prevent the availability of energy-dense nutrient-poor products and sugar-sweetened beverages.

**Indicators:**

2.1.1: Number of countries that have national or subnational\(^{15}\) school feeding programs that comply with the nutritional needs of children and adolescents, and are in line with the national food-based dietary guidelines. (Baseline: 3. Target: 12)

2.1.2: Number of countries where at least 70% of the schools have norms and/or regulations for the sale of foods and beverages in schools (“competitive foods”) that promote the consumption of healthy foods and water and prevent the availability and consumption of energy-dense nutrient-poor products and sugar-sweetened beverages. (Baseline: 8. Target: 16)

2.1.3: Number of countries where at least 70% of the schools have a source of clean drinking water. (Baseline: 3. Target: 12)

**Objective 2.2:** Promote and strengthen school and early learning policies and programs that increase physical activity.

**Indicator:**

2.2.1: Number of countries where at least 70% of schools have implemented a program that includes at least 30 minutes a day of moderate to intense (aerobic) physical activity. (Baseline: 0. Target: 10)

---

\(^{15}\) Some programs may be implemented at subnational level rather than at national level, depending on the country’s political-administrative context. Given this situation, when the majority of subnational entities have implemented any specific action recommended in this plan of action, it will be considered that the country has implemented it.
Strategic Line of Action 3: Fiscal policies and regulation of food marketing and labelling.

24. Fiscal policies and marketing regulations are known to be instrumental in reducing the consumption of tobacco (53) and alcohol. Similar results have been observed with sugar-sweetened beverages in France and Hungary. In the case of foods and beverages, Mexico has enacted taxation legislation for sugar-sweetened beverages and energy-dense nutrient-poor products. Chile and Brazil have launched initiatives to regulate food marketing. Because of children’s greater vulnerability to the persuasive power of marketing messages (for example, television and internet commercials, celebrity endorsements, in-store marketing, and toy co-branding), WHO (54) and PAHO (19) have published recommendations to limit the negative impact of food marketing to children and adolescents with a view to reducing consumption of energy-dense nutrient-poor products, fast foods, and sugar-sweetened beverages. In order to promote children’s health, governments are urged to consider establishing fiscal policies and regulatory mechanisms among policy levers to reduce childhood obesity, since current voluntary approaches have not yet demonstrated success in reducing childhood obesity (55, 56).

Objective 3.1: Implement policies to reduce children and adolescents’ consumption of sugar-sweetened beverages and energy-dense nutrient-poor products.

Indicator:

3.1.1: Number of countries that have passed legislation to tax sugar-sweetened beverages and energy-dense nutrient-poor products.
(Baseline: 1. Target: 10)

Objective 3.2: To enact regulations to protect children and adolescents from the impact of marketing of sugar-sweetened beverages, energy-dense nutrient-poor products, and fast foods.

Indicator:

3.2.1: Number of countries that have implemented regulations to protect children and adolescents from the impact of marketing of sugar-sweetened beverages, energy-dense nutrient-poor products, and fast foods in line with the Recommendations from a Pan American Health Organization Expert Consultation on the Marketing of Food and Non-Alcoholic Beverages to Children in the Americas.
(Baseline: 1. Target: 15)

Objective 3.3: To develop and implement norms for front-of-package labeling that promote healthy choices by allowing for quick and easy identification of energy-dense nutrient-poor products.
**Indicator:**

3.3.1: Number of countries that have norms in place for front-of-package labeling that allow for quick and easy identification of energy-dense nutrient-poor products and sugar-sweetened beverages, which take into consideration Codex norms.  
(Baseline: 1. Target: 15)

**Strategic Line of Action 4: Other multisectoral actions.**

25. Effectively addressing child and adolescent obesity requires sustained multisectoral actions involving the public and non-governmental sectors, as well as the private sector where appropriate. Two relevant areas addressed by this Plan of Action are the provision of urban spaces for physical activity and measures to increase the availability of and accessibility to nutritious foods. The creation of public spaces such as parks, implementation of “open streets”\(^{16}\) programs, and establishment of rapid public transportation systems are initiatives that promote physical activity. Also important are interventions to improve production, storage and distribution systems of natural and whole foods. The family farming initiative is one example of those interventions, since a sizeable proportion of natural whole foods is produced by small and medium size agricultural units in the Region.

**Objective 4.1:** To engage other government institutions and, as appropriate, other sectors.

**Indicator:**

4.1.1: Number of countries in which implementation of this Plan of Action is supported by a multisectoral approach.

**Objective 4.2:** To improve access to urban recreational spaces such as the “open streets” programs.

**Indicator:**

4.2.1: Number of countries in which the population in at least five cities has access to “open streets” programs.  
(Baseline: 6. Target: 15)

**Objective 4.3:** To take measures at national or subnational level to increase the availability of and accessibility to nutritious foods.

\(^{16}\) Ciclovias recreativas; programs that close streets to vehicular traffic periodically for recreational purposes.
Indicators:

4.3.1: Number of countries that have created incentives at national level to support family farming programs.
   (Baseline: 5. Target: 21)

4.3.2: Number of countries that introduced measures to improve relative prices and/or accessibility to healthy [healthful] foods.
   (Baseline: 3. Target: 10)

Strategic Line of Action 5: Surveillance, research, and evaluation.

26. Surveillance information systems are crucial to informing national and regional policy-making, and data disaggregation is equally important to make these policies sensitive to equity concerns (57). Before a new system is designed, it is useful to assess the country’s current capabilities and available data. Some countries have already adapted systems used internationally, such as the World Health Organization’s Global School-based Student Health Survey (GSHS) and Household Expenditure Surveys, while others have developed their own, like the Behavioral Risk Factors Surveillance System (BRFSS) in the United States and Brazil’s telephone survey for the surveillance of risk factors and chronic disease protection, Vigilância de Fatores de Risco e Proteção para Doenças Crônicas por Inquérito Telefônico (VIGITEL), among others. It is critical to integrate the different information systems, as well as to build partnerships and networks with academic and scientific institutions in order to establish comprehensive surveillance systems.

Objective 5.1: To strengthen country information systems so that trends and determinants of obesity, disaggregated by at least two equity stratifiers, are routinely available for policy decision-making.

Indicator:

5.1.1: Number of countries that have an information system to report on dietary patterns, and overweight and obesity of a nationally representative sample of pregnant women and school-aged children and adolescents, every two years.
   (Baseline: 3. Target: 8)

Monitoring and Evaluation

27. Meeting the goal and objectives in this Plan of Action is largely contingent on having reliable and timely information available from surveillance programs, and on ensuring that the information is accompanied by accurate analysis and interpretations, in order to arrive at evidence-based policy recommendations. Data collection to monitor implementation of this Plan of Action will be included as part of the monitoring system for the PAHO Strategic Plan 2014-2019. Accordingly, progress will be evaluated every two years. A baseline survey will be needed in order to establish several of the indicators. For this purpose, PAHO will establish a data collection system to monitor
activities and evaluate progress towards achieving the overall goal. The system will be based on the indicators proposed for each area of action.

**Financial Implications**

28. It is estimated that the total expenditure, including both activities and current and additional PAHO Secretariat staff, will be US$ 3,080,000.\(^\text{17}\) The cost of current staff ($1,710,000) is covered under the PAHO regular budget. Resources will be mobilized to cover the cost of additional staff ($600,000) and PAHO activities ($770,000). Activities undertaken by the countries and partners should be funded by multisectoral efforts at the local level.

+ **Action by the Directing Council**

29. The Directing Council is invited to review the Plan of Action for the Prevention of Obesity in Children and Adolescents and consider the possibility of approving the proposed resolution included in Annex A.

Annexes

PROPOSED RESOLUTION

PLAN OF ACTION FOR THE PREVENTION OF OBESITY IN CHILDREN AND ADOLESCENTS

THE 53rd DIRECTING COUNCIL,

Having reviewed the Plan of Action for the Prevention of Obesity in Children and Adolescents for 2014-2019 (Document CD53/9, Rev. 2);

Recalling the right of children to the enjoyment of the highest attainable standard of health, as set forth in the Constitution of the World Health Organization, and the United Nations Convention on the Rights of the Child;

Mindful that overweight and obesity have reached epidemic proportions among children and adolescents in the Americas and that the problem is already prompting diverse control efforts at the local as well as national levels by Member States;

Recognizing that the scientific and public health knowledge about the mechanisms involved in the current obesity epidemic and the public action required to control it is vast and robust;

Cognizant that the present Plan of Action aligns with international mandates emerging from the World Health Assembly, in particular the WHO Global Strategy on Diet, Physical Activity, and Health (WHA57.17 [2004]) and the Comprehensive Implementation Plan on Maternal, Infant, and Young Child Nutrition (WHA65.6 [2012]), in addition to mandates by PAHO Governing Bodies, including the Strategy and Plan of Action for Integrated Child Health (CSP28/10 [2012]), the Regional Strategy for Improving Adolescent and Youth Health (CD48.R5 [2008]), the Regional Strategy and Plan of Action on Nutrition in Health and Development, 2006-2015 (CD47/18 [2006]), and the Strategy and the Plan of Action for the Prevention and Control of
Noncommunicable Diseases (Documents CSP28/9, Rev. 1 [2012] and CD52/7, Rev. 1 [2013]), as well as with the United Nations Convention on the Rights of the Child (1989),

RESOLVES:

2. To urge Member States to:
   a) give priority and advocate at the highest levels for the implementation of this Plan of Action;
   b) promote coordination between ministries and public institutions, primarily in the sectors of education, agriculture, finance, trade, transportation, and urban planning, as well as with local city authorities, to achieve national consensus and synergize actions to halt progression of the obesity epidemic among children;
   c) support and lead joint efforts between the public and private sectors and civil society organizations around the Plan of Action;
   d) develop evidence-informed mass communication plans and programs to disseminate the Plan of Action and educate the public on matters of physical activity, food, healthy eating, and the value of local culinary traditions consistent with healthy eating;
   e) establish an integrated monitoring, evaluation, and accountability system for policies, plans, programs, legislation, and interventions that will make it possible to determine the impact of implementing the Plan of Action;
   f) ensure that processes are established with multiple sectors and stakeholders to review and analyze the Plan’s implementation based on national priorities, needs, and capabilities.

3. To request the Director to:
   a) provide support to the Member States in collaboration with other UN agencies and committees such as the Food and Agriculture Organization, the United Nations Children’s Fund, the World Food Programme, and the United Nations Committee on the Rights of the Child, other stakeholders and donors, as well as national sectors, to work collectively on the Plan of Action, particularly its activities at the subregional and country levels;
   b) promote implementation and coordination of the Plan of Action to ensure that activities cut across the Organization’s various program areas and different regional and subregional contexts;
   c) promote and consolidate cooperation with and among countries, with sharing of the experiences and lessons learned;
d) report periodically to the Governing Bodies on progress and constraints in implementation of the Plan of Action, as well as on its adaptation to new contexts and needs.
## Report on the Financial and Administrative Implications of the Proposed Resolution for PASB

1. **Agenda item:** Item 4.7 - Plan of Action for the Prevention of Obesity in Children and Adolescents

2. **Linkage to Program and Budget 2014-2015:**
   - **a)** Categories: 2 - Noncommunicable Diseases and Risk Factors
   - **b)** Program areas and objectives: Noncommunicable Diseases/Nutrition. Objective: Halting the percentage of children less than 5 years of age who are overweight.

3. **Financial implications:**
   - **a)** Total estimated cost for implementation over the lifecycle of the resolution (estimated to the nearest US$ 10,000, including staff and activities):
     
     It was estimated that the total expenditure with PAHO current and additional staff, and activities would be US$ 3,080,000.
   
   - **b)** Estimated cost for the 2014-2015 biennium (estimated to the nearest US$ 10,000, including staff and activities):
     
     The estimated cost for the 2014-2015 biennium is US$ 992,000.
   
   - **c)** Of the estimated cost noted in b), what can be subsumed under existing programmed activities?
     
     The cost of current staff (US$ 1,710,000) is covered through PAHO’s regular budget. Resources mobilization will be require for additional staff (US$ 600,000) and activities by PAHO (US$ 770,000). Activities by countries and partners should be funded by multisectoral efforts at local level.

4. **Administrative implications**
   - **a)** Indicate the levels of the Organization at which the work will be undertaken:
     
     This Plan of Action will be implemented at regional, sub-regional and country levels.
   
   - **b)** Additional staffing requirements (indicate additional required staff full-time equivalents, noting necessary skills profile):
     
     Additional staff recruitment would be needed (one P3-level staff at the regional office) to complete specific activities to support the implementation and evaluation of this Plan.
c) **Time frames (indicate broad time frames for the implementation and evaluation):**

*First year:* Dissemination, advocacy and mobilization of resources for implementation of the Plan at regional, sub-regional and national levels.

*Second year:* Conduct technical consultations to develop food standards, models to implement harmonized legislative and regulatory framework and guidelines to implement and evaluate evidence based programs and interventions (regulation of marketing, development of school based policies, monitoring and evaluation).

*Third year:* Capacity building to apply legislative and regulative models and guidelines to implement and evaluate programs and interventions at national level.

*Fourth year:* Technical cooperation and monitoring for the implementation of the Plan of Action.

*Fifth year:* Technical cooperation, evaluation, and reporting of the plan of action achievements.
**ANALYTICAL FORM TO LINK AGENDA ITEM WITH ORGANIZATIONAL MANDATES**

1. **Agenda item:** 4.7 - Plan of Action for the Prevention of Obesity in Children and Adolescents

2. **Responsible unit:** Department of Family, Gender and Life Course; Unit of Healthy Life Course (FGL/HL)

3. **Preparing officer:** Dr. Chessa Lutter, Dr. Enrique Jacoby and members of the inter-programmatic Working Group on Childhood Obesity

4. **List of collaborating centers and national institutions linked to this Agenda item:**
   Ministries of Health, Education and Agriculture; Institute of Nutrition of Central America and Panama Instituto de Nutrición de Centroamérica y Panamá (INCAP); Instituto de Nutrición y Tecnología de los Alimentos (INTA), Chile; Instituto Nacional de Salud Pública (INSP), Mexico; EMBARQ (USA); the Centers for Disease Control and Prevention (CDC), USA; Universidade de Sao Paulo (USP), Brazil; and the Caribbean Public Health Agency (CARPHA).

5. **Link between Agenda item and Health Agenda for the Americas 2008-2017:** This Plan of Action is linked to the Health Agenda for the Americas 2008-2017 since its proposed actions will strengthen the National Health Authorities, tackle the health determinants, reduce health inequalities, harness knowledge, science and technology, and reduce the burden of diseases associated with nutrition and non-communicable diseases.

6. **Link between Agenda item and the PAHO Strategic Plan 2014-2019:**
   This Plan of Action will contribute to achieve objectives of Category 2 - Non Communicable Diseases and Risk Factors: "Reducing the burden of noncommunicable diseases, including cardiovascular diseases, cancers, chronic lung diseases, diabetes, and mental health disorders, as well as disabilities, violence, and injuries, through health promotion and risk reduction, prevention, treatment, and monitoring of noncommunicable diseases and risk factors." Specifically, this Plan will contribute to reach global and regional targets by halting the obesity epidemic among children.

   Furthermore, this Plan is in full alignment with Category 3 - Determinants of Health and Promoting Health throughout the Life Course goals: "Promoting good health at key stages of life, taking into account the need to address the social determinants of health (societal conditions in which people are born, grow, live, work, and age), and implementing approaches based on gender equality, ethnicity, equity, and human rights."
