# HIV case-based surveillance: 2 data sources

1. Data obtained at moment of HIV testing
  - Data collection at time of first positive HIV test
  - One time data collection
  - Limited number of variables
  - Multiple sites
  
2. Data obtained during follow-up in HIV clinic
  - = HIV patient monitoring system
  - = clinical cohort (vs interval based cohort)
  - Longitudinal follow-up: multiple data collection moments
  - Larger number of variables
  - Limited number of sites (only HIV clinics)
