

162nd SESSION OF THE EXECUTIVE COMMITTEE

Washington, D.C., USA, 18-22 June 2018

Provisional agenda item 7.11

CE162/INF/11 20 April 2018 Original: Spanish

PLAN OF ACTION OF ROAD SAFETY: FINAL REPORT

Background

1. The purpose of this document is to report to the Governing Bodies of the Pan American Health Organization (PAHO) on the results obtained in the implementation of the Plan of Action on Road Safety (Document CD51/7, Rev. 1) for the period 2012-2017, adopted in 2011 during the 51^{st} Directing Council of PAHO through Resolution CD51.R6, which recognized the need to improve road safety in the Region (1, 2). The purpose of the plan was to establish guidelines for actions by the health sector in the Member States and promote initiatives to prevent road traffic injuries. Accordingly, the plan proposed a set of targets to be reached by 2017, based on 18 indicators that used data from 2007 as the baseline. These targets are evaluated in this report (1, 3).

Analysis of the Progress Achieved

- 2. The Region of the Americas has made progress toward most of the objectives proposed in the plan of action, as described in the table below and complemented in the Annex with a summary figure. The source of information for the analysis of the results was the regional report on road safety published by PAHO in 2016 (4). It should be mentioned that the criteria for evaluating the indicators related to the development of legislation were more rigorous in this final evaluation that when the baseline data were compiled.
- 3. Progress has been made in road safety, specifically in the development and designation of lead agencies as coordinating entities. There have also been improvements in legislation on driving under the influence of alcohol and the use of child restraint systems. The implementation of measures to improve road infrastructure and the use of prehospital care have also seen positive progress, and the Member States have improved their presentation of data on mortality and comorbidity associated with road safety, helping to set priorities in the countries.
- 4. Despite this progress, reforms are still required to improve legislation on speed, compulsory helmet use for motorcyclists, and compulsory seatbelt use. Furthermore, it is important to point out that there have been delays in compliance with or enforcement of

laws that have already been passed. It is also necessary to move forward in national policy-making to promote walking and cycling. It is also difficult to determine whether there have been improvements in technical vehicle inspection and review systems, due to deficiencies in the quality of data available in most of the countries.

Objective 1: Appoint a government advisory committee or a lead agency responsible for multisectoral coordination to guide national road safety activities, with special emphasis on the development of national plans for the Decade of Action for Road Safety.

Indicator, baseline, and target	Results
Number of countries that have an advisory committee or lead agency responsible for multisectoral coordination of measures to promote road safety. Baseline: 25 Target: 30	Thirty countries have an advisory committee or lead agency responsible for multisectoral coordination of measures to promote road safety.

Objective 2: Reduce the contribution of risk factors (speed, alcohol consumption, drugs and other psychoactive substances, and distractions) to road traffic injuries and increase the rate of protective equipment use (helmets, seat belts, and child safety seats).

of protective equipment use (neimets, seat betts, and chita safety seats).	
Indicator, baseline, and target	Results
Number of countries with maximum urban speed	There was no progress. The criteria
limits of 50 km/hour.	for evaluation of legislation were
Dana1's at 20	more rigorous than those considered
Baseline: 20	in the baseline.
Target: 30	
Number of countries with speed limit enforcement	Twelve countries have programs for
programs.	control and enforcement of this
Baseline: 4	legislation (an increase of eight
Target: 15	countries, 80% of the target).
Number of countries and cities that have set blood	Six new countries set the
alcohol limits for drivers equal to or less than 0.05	recommended blood alcohol limit,
g/dl.	for a total of 16 countries (80% of
	the target).
Baseline: 10	
Target: 20	
Number of countries with programs that ban driving	Ten countries joined those that
under the influence of alcohol.	already control blood alcohol levels
Baseline: 4	in drivers, bringing the total to 14
Target: 15	(93.3% of the target).
Number of countries with laws on compulsory helmet	Sixteen countries require helmet use
use for all motorcycle occupants.	for all users (64% of the target). The
	criteria for evaluating legislation
Baseline: 12	were more rigorous than those used
Target: 25	for the baseline.
L	1

Indicator, baseline, and target	Results
Number of countries with programs to promote and	Five new countries implemented
enforce helmet use.	control programs, bringing the total
Baseline: 13	to 18 (72% of the target).
Target: 25	True ntry there a countries out of a total
Number of countries with laws on compulsory seat belt use for all vehicle occupants.	Twenty-three countries out of a total of 30 have this legislation (76.6% of
•	the target).
Baseline: 20 Target: 30	the targety.
Number of countries with a program to promote and	Seven new countries have
enforce seat belt use.	implemented this legislation,
Baseline: 18	bringing the total to 25 (83.3% of the
Target: 30	target).
Number of countries with laws on the mandatory use	Six new countries have adopted this
of child restraint systems in vehicles.	law, for a total of 27 (90% of the
Baseline: 21	target).
Target: 30	
Number of countries with programs to promote and	No advances have been made with
enforce the use of child restraint systems.	this indicator.
Baseline: 5	
Target: 15	

Objective 3: Improve mass transit policies through the adoption of the principles of safety, equity, and accessibility to promote the exercise of human rights.

equity, and accessibility to promote the exercise of numan rights.	
Indicator, baseline, and target	Results
Number of countries with policies that support investment in public transportation.	Advances have been made in nine countries, bringing the total to 23
Baseline: 14 Target: 30	(76.6% of the target).

Objective 4: Have organized and integrated prehospital care services for victims of road traffic injuries.

injuries.	
Indicator, baseline, and target	Results
Number of countries with a prehospital care system integrated into the health sector.	Five countries advanced during the period of the plan, and a total of
Baseline: 22 Target: 30	27 now meet this indicator (90% of the target).

Objective 5: Improve the quality of data on road traffic injuries so that mortality and morbidity rates reflect victim characteristics.

raies rejiect victim characteristics.	
Indicator, baseline, and target	Results
Number of countries with data on mortality rates from road traffic injuries. Baseline: 30	A total of 34 countries out of 37 (the established target) have data on mortality (92%).
Target: 37	

Indicator, baseline, and target	Results
Number of countries with data on morbidity rates from road traffic injuries (number of injured who receive care from prehospital and hospital service providers). Baseline: 3 Target: 10	A total of 26 countries have data on morbidity rates ¹ from road traffic injuries. This indicator not only was reached, but even exceeded the established goal.

Objective 6: Promote the development of infrastructure conducive to the safe transit of all users of urban roads and highways, particularly pedestrians, cyclists, and motorcyclists, who are the most vulnerable road users.

are the most vatherable road users.	
Indicator, baseline, and target	Results
Number of countries with national policies that encourage walking and bike riding. Baseline: 10 Target: 30	Only four countries improved their policies on walking and cycling, putting the total at 14 countries (46.7% of the target).
Number of countries that incorporate road safety features into road design and apply measures to reduce speed in areas frequented by pedestrians and/or cyclists. Baseline: 4 Target: 10	Twelve countries have policies to separate road users and protect vulnerable users such as pedestrians and cyclists ² . This indicator was not only reached, but even exceeded the established goal.

Objective 7: Recommend and support the sector responsible for creating or strengthening a technical vehicle inspection system for the entire vehicle fleet, including two- or three-wheel vehicles. In addition, encourage industries to bring their safety standards into line with the recommendations of the Member States.

recommendations of the Member States.	
Indicator, baseline, and target	Results
Number of countries with a technical vehicle inspection and review system in place for all vehicles. Baseline: 23	There are no data available in the Region to analyze the achievement of this target.
Target: 30	

¹ The total number of countries with data on morbidity includes those that collect data on the number of crashes resulting in both fatal and non-fatal injuries, since the <u>Global status report on road safety 2015</u> questionnaire groups both indicators in a single question.

² In the PAHO database, there is no data available on the countries that incorporate road safety features into road design and apply measures to reduce speed. The <u>Global status report on road safety 2015</u> compiles data on countries with policies to separate road users and protect vulnerable users (pedestrians, cyclists, and motorcyclists).

Action needed to improve the situation

- 5. In view of the progress described above, the following measures should be considered:
- a) Continue to work for the recognition of road safety as a public health priority in accordance with the recommendations of the Brasilia Declaration, adopted during the Second Global High-level Conference on Road Safety in 2015 (5), and in accordance with target 3.6 of the Agenda 2030 for Sustainable Development, to "halve the number of global deaths and injuries from road traffic accidents" by 2020. (6).
- b) Considering the significant increase in injuries and deaths in motorcycle crashes in the Region, it is recommended that the Member States define, strengthen, or improve road safety policies aimed at motorcyclists. Furthermore, in the area of general road safety, all risk factors should be taken into account, including "emerging" risks, such as distracted driving due to the use of mobile devices and driving under the influence of psychoactive substances. Furthermore, it is important to consider these new realities in the Region, support the countries, and step up international cooperation to achieve the SDG targets concerning road safety.

Action by the Executive Committee

6. The Executive Committee is requested to take note of this final report and make the recommendations it deems relevant.
