A photograph of a woman with short dark hair, wearing a patterned orange and white top, holding a young child. The child is wearing a white shirt with a pink graphic. They are standing in front of a building with white columns and a window with horizontal bars.

HEPATITIS.

TIME TO TEST. TIME TO TREAT. TIME TO CURE.

© WHO/Zakwathu Communications Malawi

HEPATITIS ATTACKS THE MOST VULNERABLE

Over 90% of new hepatitis B infections occur through mother-to-child transmission and during early childhood. But other groups are also at higher risk of both hepatitis B and C, including people who inject drugs; men who have sex with men; people who have had tattoos or acupuncture; partners of people living with hepatitis B; and health care workers.
