

MONITORING FRAMEWORK

FOR HIV SERVICES FOR KEY POPULATIONS

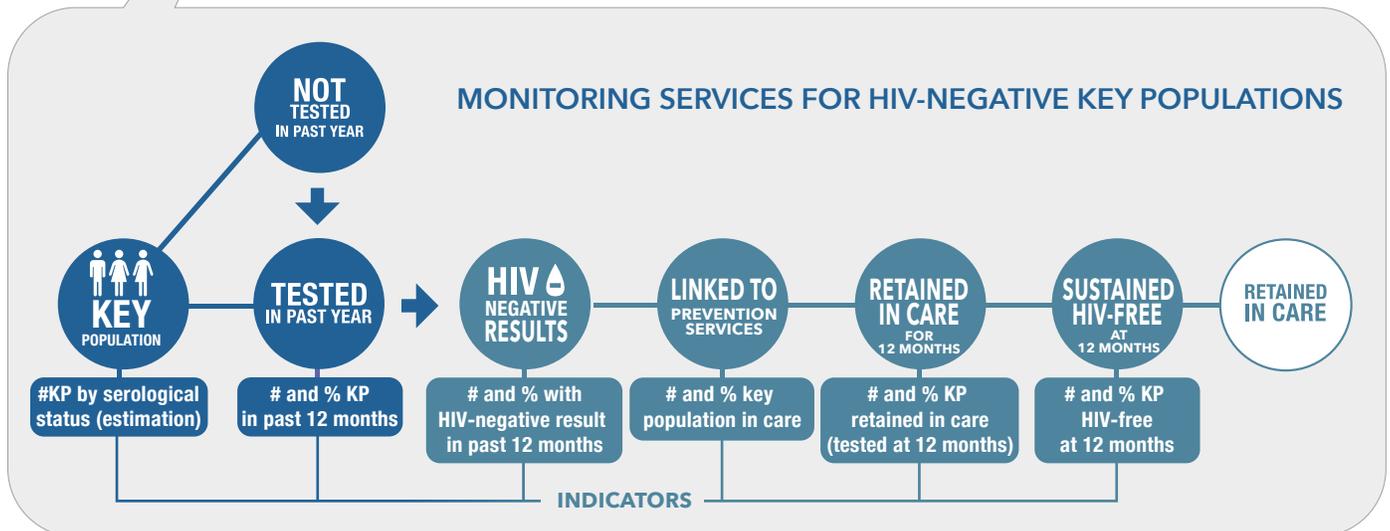

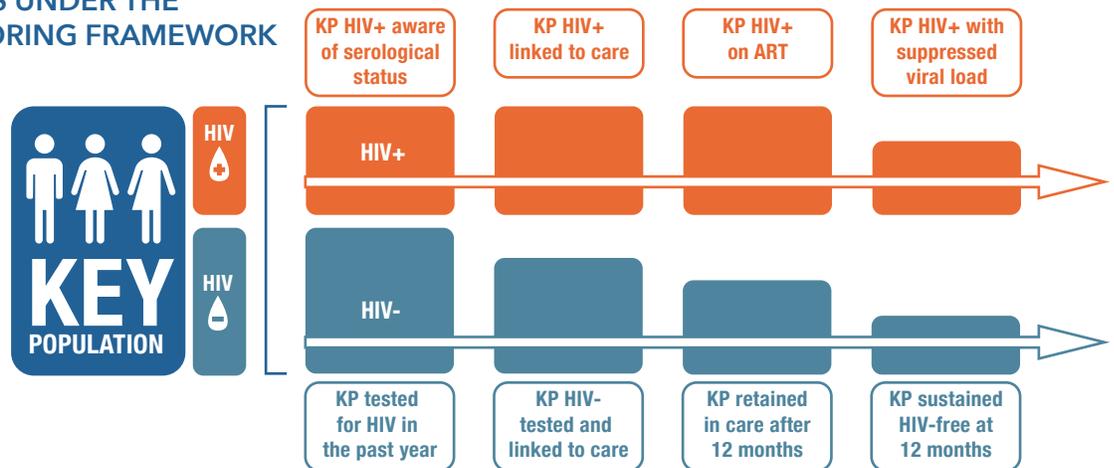

A NOVEL WAY

OF MONITORING HIV PREVENTION SERVICES FOR KEY POPULATIONS

In Latin America and the Caribbean, 70 to 80% of new HIV infections occur in key populations (KP) and their clients and sexual partners. It is critical to monitor HIV and STI prevention services among key populations.

- The PAHO monitoring framework establishes indicators of the continuum of care and prevention of HIV/STIs for key populations.
- Impact is measured in terms of keeping people HIV-free or with undetectable viral load (among HIV positive key populations).
- It implies a longitudinal follow-up of persons through a package of prevention and care services.

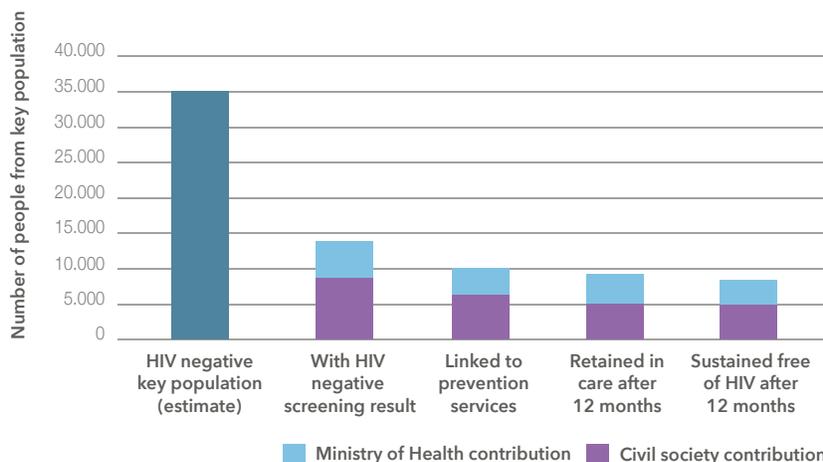

CONTINUUM OF HIV PREVENTION AND CARE SERVICES UNDER THE NEW PAHO MONITORING FRAMEWORK

MONITORING SERVICES PROVIDED BY CIVIL SOCIETY

- Measuring the contribution of civil society organizations is essential to promote sustainability of services for key populations.
- This tool measures the HIV/STI services for key populations provided by Government and civil society organizations.

EXAMPLE OF THE HIV PREVENTION CASCADE

COUNTRY EXPERIENCE IMPLEMENTING THE MONITORING FRAMEWORK

- Bolivia, El Salvador, Honduras and Paraguay, have started to implement the framework.
- Monitoring HIV/STI services will allow these countries to know the bottlenecks and improve their response to the HIV/STI epidemics.

“The prevention cascade helps evaluate services for key populations in VICITS clinics.”

Dr. Arturo Carrillo, Advisor to the National STI/HIV/AIDS Program, **EL SALVADOR**.

“Identifying key populations at substantial risk of acquiring HIV will strengthen combination prevention efforts.”

Dr. Tania Samudio, Director of the National Program for HIV/STI Control (PRONASIDA), **PARAGUAY**.

“We want to visualize our contribution to HIV prevention in Honduras; I am sure that the support of the civil society is a determining factor in the country.”

Dany Montecinos, Coordinator of Asociación Kukulcán, **HONDURAS**.

“This tool will help improve our services to reduce HIV infections in our population”

Jean Pierre Mendoza Arteaga, Program Manager of Fundación Igualdad LGBT, **BOLIVIA**.

THE ULTIMATE GOAL OF THE PAHO MONITORING FRAMEWORK IS TO IMPROVE SERVICES FOR KEY POPULATIONS THROUGH ENHANCED MONITORING WITHIN A COMBINATION PREVENTION APPROACH.
