

1. NEW: Measuring health gains from sustainable development

Measuring health can tell us how well we are advancing sustainable development. For instance, if air pollution is reduced then chronic respiratory and cardiovascular disease will likely decline. Choosing the right indicators of healthy development is important to measuring progress meaningful to human wellbeing. Download the thematic briefings on key Rio+20 themes from a recent WHO analysis and expert consultation:

Disaster risk management

Energy

Jobs

Sustainable cities

Water

Agriculture, food and nutrition security

2. Health is now noted explicitly in the Rio+20 "Zero" draft document "The Future We Want." Negotiations are still underway, however. More health focus can help ensure that health is part of the follow-up decisions to be made in Rio for sustainable development. WHO has three key messages related to health and sustainable development:

1. Achieve universal health access: Healthy people are better able to learn, earn and contribute positively to their societies. Protecting people from catastrophic health expenditures can help people fight disease, fight poverty, and stay healthy. Reducing gender, employment and housing inequities also improves health.

2. Enhance health gains from sustainable development investments and decisions: Health gain from development is not automatic. Strategies need to be designed with health in mind, including health impact assessment (HIA). Healthier environments in homes and workplaces, in rural settings and cities, and including access to healthy foods, water, energy and transport, could help prevent up to one quarter of deaths annually worldwide (WHO-supported expert review - 2004 data).

3. To adopt health indicators to measure progress /achievements in sustainable development - Many key measurements of health can also tell us how well we are advancing sustainable development, and vice versa

4. Key RIO+20 side events on Health and Sustainable Development, which WHO is co-sponsoring. Panelists still being confirmed. Final details to be posted on our "Health in green economy" website Thursday, 14 June.

**Tuesday, 19 June 2012**
