

# Antimicrobial resistance can affect **anyone**, at any **age**, in any **country**

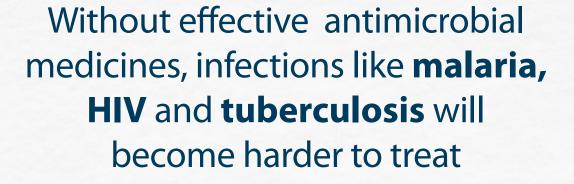

## It's happening **right now,** all over the world

# By changing how we prescribe and use antibiotics we can keep them working for longer

## Hand washing and vaccinations can stop you getting sick, so you won't need antibiotics

WHO is working with countries all over the world to help reduce the impact of antimicrobial resistance

# **Antibiotics** don't cure flu or the common cold

# Drug-resistant bacteria are responsible for **25,000 deaths** accross the EU each year

# Antimicrobial resistance: when the **medicines** we rely on to treat or prevent infections **stop working**

# The **over-use of antibiotics** is contributing to antibiotic resistance
