SOURCE: Cases reported by the IHR National Focal Points to the WHO IHR Regional Contact Point for the Americas and through the Ministry of Health websites, 2016

NOTES: Data is shared in an effort to transparently disseminate available information reported by Member States. Any subsequent interpretation and analysis of this data should consider differences in surveillance systems and reporting requirements. Information may change as Member States review and integrate retrospective data.

<sup>a</sup>PAHO/WHO Case definitions for suspected and confirmed Zika cases is available at: [http://www.paho.org/hq/index.php?option=com\\_content&view=article&id=11117&Itemid=41532&lang=en](http://www.paho.org/hq/index.php?option=com_content&view=article&id=11117&Itemid=41532&lang=en)

<sup>b</sup>Incidence rate (autochthonous suspected + autochthonous confirmed) / 100,000 pop.

<sup>c</sup>Deaths among Zika cases do not include deaths related to Guillain-Barré syndrome (GBS) or congenital malformations associated with Zika virus infection. As of 12 May 2016, previously reported deaths related to GBS were removed from this total.

<sup>d</sup>Confirmed congenital syndrome associated with Zika virus infection case definition: Live newborn who meets the criteria for a suspected case of congenital syndrome associated with Zika virus AND Zika virus infection was detected in specimens of the newborn, regardless of detection of other pathogens. Case definitions for congenital syndrome associated with Zika virus infection is available at: [http://www.paho.org/hq/index.php?option=com\\_content&view=article&id=11117&Itemid=41532&lang=en](http://www.paho.org/hq/index.php?option=com_content&view=article&id=11117&Itemid=41532&lang=en)

<sup>i</sup>Confirmed cases in the United States of America includes one laboratory acquired case. Available at: <http://www.cdc.gov/zika/geo/united-states.html>

<sup>j</sup>After retrospective review, laboratory-confirmed cases was adjusted by the El Salvador IHR National Focal Point as of 25 August 2016.

<sup>k</sup>On 24 October, the Guatemala IHR National Focal Point provided an update indicating that there were 15 laboratory-confirmed cases of microcephaly associated with Zika virus infection. They have explained that the retraction of two cases is due to an erroneous information posted by the Ministry of Health were two of the mothers who tested positive for Zika virus had been included in the total count; but no samples were obtained of the two infants with microcephaly. For this reason, the total was changed by Guatemala to 15.

<sup>l</sup>After retrospective review, laboratory-confirmed cases were re-classified as imported cases by the Panama Ministry of Health as of 25 August 2016.

<sup>m</sup>As of 6 October, suspected Zika cases were adjusted by the Dominican Republic Ministry of Public Health after retrospective review. As of 20 October, confirmed Zika cases were adjusted by the Dominican Republic Ministry of Public Health after retrospective review.

<sup>n</sup>Per the Caribbees Guyane Bulletin the epidemiological situation is classified in four level phases: Level 1 absence of autochthonous circulation; Level 2 initial autochthonous transmission; Level 3 epidemic; Level 4 end of epidemic and results. In the instance that a territory reaches Level 3, the data on all confirmed cases is no longer included in the epidemiological bulletin. Martinique was classified as Level 3 since 20 January 2016. Parts of French Guiana were classified as Level 3 on 22 January 2016 and 1 April 2016. Guadeloupe was classified as Level 3 since 28 April 2016.

<sup>o</sup>After retrospective review by Ecuador Ministry of Public Health, only laboratory-confirmed cases were included in the confirmed Zika cases for Ecuador, previously reported non-laboratory-confirmed cases were included in the suspected Zika cases as of 18 August; imported Zika cases was lowered as of 25 August; suspected Zika cases was lowered as of 8 September; suspected and imported cases were lowered as of 6 October; and imported and suspected Zika cases were adjusted as of 20 October; suspected Zika cases were lowered as of 30 November.

<sup>p</sup>After retrospective review, laboratory-confirmed cases was adjusted by the Venezuela (Bolivarian Republic of) IHR National Focal Point as of 25 August 2016.

<sup>q</sup>Brazil Ministry of Health case definition for confirmed cases of congenital syndrome associated with Zika virus infection includes confirmed and probable cases per PAHO's case definition. As of EW 47 of 2016, 435 cases were confirmed for Zika virus by laboratory criteria. Information on Suspected and confirmed Zika cases is available at: <http://portalsaudefsaude.gov.br/images/pdf/2016/outubro/18/2016-029-Dengue-publicacao-n-34.pdf>

<sup>r</sup>As of 11 November, suspected Zika cases were adjusted by the Brazil Ministry of Public Health after retrospective review.

<sup>s</sup>Argentina Ministry of Health reports that one of the mothers of the congenital case acquired the Zika virus infection in Bolivia.

<sup>t</sup>The data provided herein is the sum of cases reported for Bonaire (60), Sint Eustatius (16) and Saba (9).

<sup>u</sup>After retrospective review, suspected cases were adjusted by the Grenada Ministry of Health as of 13 October 2016

<sup>v</sup>Per information shared by the Netherlands IHR NFP to PAHO/WHO, the confirmed Zika cases was adjusted for Sint Maarten.
