Governance of the Mental Health System

• The first strategic line of action of the PAHO Plan of Action on Mental Health deals with the formulation and implementation of policies, plans, and laws related to mental health.

• Its objectives involve strengthening leadership and governance for the formulation of comprehensive mental health plans that are integrated with public policies, and improving the availability of national mental health legislation aligned with international human rights instruments.
### TABLE 1.1  Existence and revision status of mental health policies and plans

FIGURE 1.2.2 Degree to which legislation aligns with human rights instruments (%)

- Legislation that promotes transition towards community-based mental health services (N=11): 92%
- The legislation promotes the right of people with mental disorders to exercise their legal capacity (N=10): 83%
- Legislation that promotes options to prevent coercive practices (N=11): 92%
- Legislation that includes measures that enables persons with mental disorders to protect their rights and make complaints to an independent judicial body (N=10): 83%
- Legislation that provides for regular inspections of human rights conditions by an independent body (N=10): 83%
Financial and Human Resources

- Financial resources are essential for achieving the objectives of plans and programs, and for developing and maintaining mental health services.
- The human and financial resources allocated for mental health are limited, constraining the implementation of national plans.

Availability of Mental Health Services

• The median number of beds for mental health service users ranges from 16.7 per 100,000 population in psychiatric hospitals to 2.9 per 100,000 for psychiatric services in general hospitals.
The bar chart illustrates the median rate per 100,000 inhabitants for mental health beds by different regions and income categories. The data is categorized into five types of beds:

1. Beds for children and adolescents
2. Forensic beds
3. Beds in community-based residential facilities
4. Beds in psychiatric units of general hospitals
5. Beds in psychiatric hospitals

The chart compares the median rates across regions such as Total, Canada and the United States, Central America, Mexico, the Latin Caribbean, South America, and income categories like Low-income, Lower middle-income, Upper middle-income, and High-income.

Promotion and Prevention

- 17 countries (73% of the countries that responded) have at least two functioning national multisectoral mental health and prevention programs;
- Of the programs reported to be operational, most are concerned with suicide prevention, early childhood development, promotion of parental mental health, and mental health promotion in schools (15% each).
- Suicide continues to be an important problem in the Region, with rates in the United States and Canada subregion above the world average.
FIGURE 4.1.1 Principal type of program/focus: percentage of totally functional programs

- Mental health awareness/human rights protection/combatting stigma: 13%
- Suicide prevention: 19%
- Violence prevention (gender-based, child abuse): 6%
- Early childhood development/stimulation: 6%
- Parental mental health promotion: 13%
- School-based mental health promotion: 13%
- Promotion of mental health in the workplace: 13%
- Other (e.g., war and disaster survivors): 19%
FIGURE 4.2.1  Age-standardized suicide rates per 100,000 population, by subregion and income level
Conclusions

• the Region has seen a nearly 100% increase in per capita annual mental health spending (from US$ 6.96 to US$ 13.8).

• Reduction in spending on psychiatric hospitals (from 73% to 61%).

• However, psychiatric hospitals continue to receive more than half the budget in the Region and practically 100% of the resources in the non-Latin Caribbean.
Conclusions

- There was no reduction in the median number of beds in psychiatric hospitals at the regional level,
- At the same time, the availability of beds in the psychiatric units of general hospitals in the Region has generally risen (from 0.65 to 2.9 per 100,000 population) except in the non-Latin Caribbean subregion (declining from 4.7 to 4.3 per 100,000 population).
Conclusions

- The regional rate of admissions to psychiatric hospitals (33.6 per 100,000 population) has declined since 2014 (from 44.2 per 100,000 population).
- The number of beds in community-based residential facilities in the Region has increased, nevertheless, the availability of beds in these facilities is 12 times lower than in psychiatric hospitals.
Gracias
