Tuberculosis is the leading killer of people with HIV

In 2018, there were 251,000 deaths from TB among people with HIV.*

862,000* people with HIV fell ill with TB

Only 56% of them were diagnosed with both HIV and TB

End preventable deaths by ensuring early access to TB treatment, life-saving antiretroviral therapy and TB preventive treatment

*The 95% uncertainty intervals are 223,000 – 281,000 for deaths and 776,000 – 952,000 for incidence.
