HIV PREVENTION

IF YOU ARE HIV-

GET TESTED FOR HIV

USE CONDOMS AND LUBRICANTS
Consistent and correct use of condoms and lubricants reduces the risk of getting HIV and other sexually transmitted infections by up to 94%.

GET TESTED FOR STIs
Testing regularly for STIs and treating them reduces the possibility of contracting HIV.

PREP
Daily use of pre-exposure prophylaxis (PrEP) by a person who does not have HIV prevents infection before engaging in high-risk consensual sex.

PEP
Post-exposure prophylaxis (PEP) is used in emergency situations to prevent HIV infection if taken up to 72 hours after engaging in high-risk consensual sex or other potential exposure.

IF YOU ARE HIV+

USE CONDOMS AND LUBRICANTS
Consistent and correct use of condoms and lubricants reduces the risk of getting HIV and other sexually transmitted infections by up to 97%.

GET TESTED FOR STIs
Testing regularly for STIs and treating them reduces the possibility of transmitting HIV.

ANTIRETROVIRALS TREATMENT
A person living with HIV who correctly takes medication does not transmit the virus to others.

ANTIRETROVIRALS TREATMENT
Remaining in treatment is key for a healthy and long life, and for not transmitting HIV to others.

Governments should make sure everyone has access to all HIV prevention and treatment services recommended by WHO, free of stigma and discrimination.
