

# Global & Regional Update. 2 PM WDC.

8 April 2020

**Global**    1,394,088  
cases

81,630  
deaths

209  
countries/territories/areas

## HIGHLIGHTS

In the Region of the Americas, an additional 37,046 cases and 2,207 deaths were reported in the past 24 hours – representing a 9 % (cases) and 17% (deaths) relative increase compared to the previous day.

- The United States of America contributed approximately 86% (31,709) of all new cases and deaths (1,895) reported in the region. The United States also continues to contribute to majority of the total cases (87%) and deaths (85%).
- Of the remaining 5,337 new cases reported in the past 24 hours, approximately half was reported by Canada (1,384) and Brazil (1,661) and the rest were reported from 35 other countries/territories in the region.
- Of the remaining 312 new deaths, Brazil (114), Ecuador (82) Canada (56), Mexico (16) and Peru (15) contributed to 91% of the total. The remaining 29 new deaths were reported from 13 other countries/territories in the region
- To date, a total of 454,724 confirmed and probable cases, including 15,015 deaths have been reported from all 54 countries/territories in the Region of the Americas (see Table on page 3). Of the total, there are 454,710 confirmed cases including 14,775 deaths and 14 probable cases including 240 deaths.
- New York state in the US – the current epi-center – reported a second day with record high deaths in one day since the outbreak began. A total of 779 new deaths were reported in the state which now has 149,316 confirmed cases – a higher case number than any country in the world besides the United States. However, the number of hospitalizations has been decreasing and the daily % increase in hospitalizations has been in the single digits for 5 consecutive days compared to the 25-30% increases seen in recent weeks.
- In Chicago (Illinois state), 68% of COVID-19 deaths have been reported in African Americans, despite only representing 30% of the population.

**WHO MASK GUIDANCE:** The WHO published guidance for the use of face masks , including by the general public in the community. The guidance indicates that there is sufficient evidence that proper face mask use by infected individuals can reduce the risk of transmission for influenza-like illnesses, including coronaviruses.

**The United Kingdom:** A record increase of 938 deaths in one day was recorded by UK hospitals in the past 24 hours for a total of 7,097 deaths to date. In addition, the UK PM Boris Johnson remains in intensive care with a COVID-19 diagnosis – his condition is reportedly stable.

**Spain:** After a week of decreasing new daily cases, Spain reported increasing numbers in two consecutive days—5,478 new cases yesterday and 6,180 new cases today , bringing the total to 146,690 cases and 14,555 deaths (757 new).

**Italy:** A decline in new daily cases continues in Italy. From 6,557 new cases reported on March 21 to 3,039 new cases on April 7 – the lowest daily number since March 13. To date, Italy has reported a total of 135,586 confirmed cases, and 17,127 deaths.

New Country

\*\* Ecuador data for the previous day were adjusted; therefore, differences in the total confirmed cases and deaths reflect this adjustment, as well as the % increase in confirmed cases in Ecuador

Note: WHO recommends using the following categories to describe **transmission patterns** at national and sub-national levels (wherever possible) to guide decisions for preparedness, readiness and response activities.

Category number	Category name	Definition
1	No cases	Countries/territories/areas with no cases
2	Sporadic cases	Countries/territories/areas with one or more cases, imported or locally detected
3	Clusters of cases	Countries/territories/areas experiencing cases, clustered in time, geographic location and/or by common exposures
4	Community transmission	Countries/area/territories experiencing larger outbreaks of local transmission defined through an assessment of factors including, but not limited to: - Large numbers of cases not linkable to transmission chains - Large numbers of cases from sentinel lab surveillance - Multiple unrelated clusters in several areas of the country/territory/area
