

Global & Regional Update. 2 PM WDC.

21 April 2020

Global 2,434,433
 cases

 170,953
 deaths

 212
 countries/territories/areas
HIGHLIGHTS

In the Region of the Americas, an additional 31,345 cases and 2,601 deaths were reported in the past 24 hours – representing a 4% (cases) and 5% (deaths) relative increase compared to the previous day. Majority of the new cases (25,634 cases, 82%) and deaths (2,154 deaths, 83%) continue to be reported from the United States of America.

- **Other countries with a significant increase in the number of cases** compared to the previous day are Brazil (1,927 additional cases, 5% increase), Canada (1,991 additional cases, 6% increase), Peru (697 additional cases, 4% increase) and Mexico (511 additional cases, 6% increase).
- While the true mortality of COVID-19 will take some time to fully understand, the data we have so far indicate that the highest **crude mortality ratio** (the number of reported deaths divided by the reported cases) among the countries with more than 1,000 cumulative cases reported to date are **Mexico (8.1%), Ecuador (13.7%), and Brazil (6.3%)**. See table 1 The ratio for all three (3) countries have increased since last week (14 April) when the CMR (%) for each country were as follows: Mexico (6.6%), Ecuador (11%) and Brazil (5.6%)
- **In the United States of America, New York State** reported a fifth consecutive day of declining case counts with 4,726 new cases reported in the past 24 hours – the lowest daily incidence since 20 March. New York City represents more than half of the new cases reported statewide (2,370 new cases), but the city has also reported 5 consecutive days of declining incidence. The declining trend was also observed in the daily death toll with 481 new deaths reported in the past 24 hours – a number significantly lower than all of last week.
- **The US Food and Drug Administration (FDA)** has approved the country's first at-home coronavirus test kit. LabCorp is the company that produced the test kits and the kit, currently called Pixel, costs 119\$.

Global Update

India and Pakistan continue to report increasing rates of COVID-19 cases with 1,329 new cases reported in India, and 796 new cases reported in Pakistan – the latter is most likely a result of increased testing in the last two days in Pakistan. Despite a nationwide lock down in India, an increasing trend over all is observed in the two south-east Asian countries.

Hong Kong reported no local cases of COVID-19 for the first time since March. The city has which has been battling a second wave of infections fueled in large part by residents who were returning from Europe and the United States, extended their social distancing measures to May 7.

In Singapore, the Prime Minister extended their lockdown until June 1 in response to a rapid increase in new cases the last few weeks - “vast majority” of which are among residents of migrant worker dormitories

In Europe, Italy is the latest country to announce relaxation of their social distancing measures to slowly open their country, joining Germany, Spain and Denmark. The country had issued stringent restrictions on the movement of people across the country six weeks ago.

*Recovered counts as indicated by reporting Member States

†Data reported by state/district/territory public health authorities. Confirmed case and death totals may include a small proportion of probable cases and deaths due to differences in reporting. Excludes counts for Guam, Commonwealth of the Northern Marianas, Puerto Rico, and the United States Virgin Islands

‡To date, the probable deaths are those reported and defined by New York City, available at <https://on.nyc.gov/2RloJdU>

§Probable deaths as defined by the Ecuador Ministry of Public Health, available at: <https://bit.ly/2RZtqjR>

¶Total confirmed cases reported as per Peru Ministry of Health, of which 8,964 cases tested positive by RT-PCR and the remaining 7,361 cases tested positive by rapid diagnostic tests (RDTs); however, to date, these RDTs are not recommended for use by WHO

Note: WHO recommends using the following categories to describe **transmission patterns** at national and sub-national levels (wherever possible) to guide decisions for preparedness, readiness and response activities.

Category number	Category name	Definition
1	No cases	Countries/territories/areas with no cases
2	Sporadic cases	Countries/territories/areas with one or more cases, imported or locally detected
3	Clusters of cases	Countries/territories/areas experiencing cases, clustered in time, geographic location and/or by common exp
4	Community transmission	Countries/territories/experiencing larger outbreaks of local transmission defined through an assessment of factors including, but not limited to: <ul style="list-style-type: none"> - Large numbers of cases not linkable to transmission chains - Large numbers of cases from sentinel lab surveillance - Multiple unrelated clusters in several areas of the country/territory/area
