Mexico - Culican (Ages 13-15) Global Youth Tobacco Survey (GYTS)

FACT SHEET

The Mexico - Culican GYTS includes data on prevalence of cigarette and other tobacco use as well as information on five determinants of tobacco use: access/availability and price, exposure to secondhand smoke (SHS), cessation, media and advertising, and school curriculum. These determinants are components Mexico - Culican could include in a comprehensive tobacco control program.

The Mexico - Culican GYTS was a school-based survey of students in grades 1, 2 and 3 conducted in 2005.

A two-stage cluster sample design was used to produce representative data for Mexico - Culican. At the first stage, schools were selected with probability proportional to enrollment size. At the second stage, classes were randomly selected and all students in selected classes were eligible to participate. The school response rate was 88.0%, the class response rate was 100.0%, the student response rate was 88.6%, and the overall response rate was 78.0%. A total of 1,247 students aged 13-15 participated in the Mexico - Culican GYTS.

Prevalence

29.8% of students had ever smoked cigarettes (Boy = 33.5%, Girl = 25.3%)

14.6% currently use any tobacco product (Boy = 16.3%, Girl = 12.2%)
