What is the PAHO Revolving Fund?

The PAHO Revolving Fund is a big part of what makes the Americas one of the biggest successes in the annals of vaccination.

The Fund marries economics and public health to protect people against some of the world’s worst diseases, including polio, measles, yellow fever, rotavirus and human papillomavirus, to name just a few.

By buying in bulk, the Fund greatly improves its purchasing power. In other words, it takes advance of economics of scale.

Through the fund, 41 countries and territories pool their resources to procure high-quality vaccines, syringes and related supplies for their populations at the lowest price.

Since its inception in 1977, the Fund has helped to vaccinate tens of millions of children and save millions of lives.

This helps to explain why the Region of the Americas was the first of the six WHO regions to eliminate polio, why it is the only one, so far, to eliminate measles and rubella, and why its infant mortality rate is so low.

At the same time, the Fund has facilitated the rapid and equitable introduction of new vaccines.

The Fund is highly popular with the Region’s Member States. In September 2013, the Directing Council said the “operational and financial capacity to deliver vaccinations has made the Americas a world leader in the elimination of vaccine-preventable diseases”. It called the Fund “a pillar of the regional immunization program’s leadership position”.

The PAHO Revolving Fund: protecting the people of the Americas through vaccination.
