^{**} After retrospective review, laboratory-confirmed cases were re-classified as imported cases by the Panama Ministry of Health as of 25 August 2016.

^{***} Per the Circ Antilles Guyane Bulletin the epidemiological situation is classified in four level phases: Level 1 absence of autochthonous circulation; Level 2 initial autochthonous transmission; Level 3 epidemic; Level 4 end of epidemic and results. In the instance that a territory reaches Level 3, the data on all confirmed cases is no longer included in the epidemiological bulletin. Martinique was classified as Level 3 since 20 January 2016. Parts of French Guiana were classified as Level 3 on 22 January 2016 and 1 April 2016. Guadeloupe was classified as Level 3 since 28 April 2016.

^{****} After retrospective review, only laboratory-confirmed cases were included in the confirmed Zika cases for Ecuador. As of 18 August, previously reported non-laboratory-confirmed cases were included in the suspected Zika cases. As of 25 August, the imported Zika cases was lowered based on the Ecuador Ministry of Health Epidemiological Bulletin.

^{*****} The data provided herein is the sum of cases reported for Bonaire (7), Sint Eustatius (1) and Saba (1).
