In the 26 April Zika update from the Netherlands Ministry of Health, Welfare and Sport, a total of 235 suspected and 381 confirmed cases were notified to PAHO/WHO (EW 1 of 2016 to EW 16 of 2017). On 21 June 2017, the Netherlands Ministry of Health, Welfare and Sport reported 56 additional confirmed cases, resulting in a cumulative total of 235 suspected and 437 confirmed cases of Zika distributed between EW 1 of 2016 and EW 30 of 2017. In addition to the 235 suspected cases reported through national surveillance systems, 72 cases were suspected through other sources, including sexual transmissions (59) and laboratory transmissions (13) and primary vector transmission through an imported mosquito (4). On 12 August 2017, 459 cases (56 confirmed and 353 suspected) have been reported. Available at: http://www.rivm.nl/zika/epidemiological-table.html.

The case reported by Santé publique France corresponds to a fetus with cerebral malformation of mothers infected with Zika. In addition to the one reported case of congenital syndrome, on 9 June 2017, Santé publique France reported 18 fetuses with cerebral malformations of mothers infected with Zika.

Deaths among Zika cases do not include deaths related to Guillain-Barré syndrome (GBS) or congenital malformations associated with Zika virus infection. As of 12 May 2016, previously reported deaths related to Zika were removed from this total.

The three cases of congenital syndrome associated with Zika virus infection were confirmed by the Guyana Ministry of Health on June 2017; these cases were detected between September and December 2016.

In the previous Zika update published by the Ecuador Ministry of Public Health on 19 July 2017, a total of 3,842 cases of Zika virus infection were notified to PAHO/WHO (EW 52 of 2015 to EW 28 of 2017), of which 18 cases were newly reported cases between EW 3 and EW 4 of 2017.

On 10 August 2017, the Pan American Health Organization reported 15 confirmed and 17 suspected cases of Zika virus infection in the Dominican Republic, corresponding to a cumulative total of 93 confirmed and 133 suspected cases (EW 11 of 2016 to EW 30 of 2017). In addition to the 93 confirmed cases reported through national surveillance systems, 40 cases were newly reported cases between EW 11 and EW 30 of 2017, corresponding to a cumulative total of 93 confirmed and 133 suspected cases distributed between EW 11 of 2016 to EW 30 of 2017.
