ⁱConfirmed cases in the United States of America includes one laboratory acquired case. Available at: <http://www.cdc.gov/zika/guinea-states.html>

^jAfter retrospective review, laboratory-confirmed cases was adjusted by the El Salvador IHR National Focal Point as of 25 August 2016.

^kOn 24 October, the Guatemala IHR National Focal Point provided an update indicating that there were 15 laboratory-confirmed cases of microcephaly associated with Zika virus infection. They have explained that the retraction of two cases is due to an erroneous information posted by the Ministry of Health were two of the mothers who tested positive for Zika virus had been included in the total count; but no samples were obtained of the two infants with microcephaly. For this reason, the total was changed by Guatemala to 15.

^lAfter retrospective review, laboratory-confirmed cases were re-classified as imported cases by the Panama Ministry of Health as of 25 August 2016.

^mAs of 6 October, suspected Zika cases were adjusted by the Dominican Republic Ministry of Public Health after retrospective review. As of 20 October, confirmed Zika cases were adjusted by the Dominican Republic Ministry of Public Health after retrospective review.

ⁿFor the Circ Antilles Guyane Bulletin the epidemiological situation is classified in four level phases: Level 1 absence of autochthonous circulation; Level 2 initial autochthonous transmission; Level 3 epidemic; Level 4 end of epidemic and results. In the instance that a territory reaches Level 3, the data on all confirmed cases is no longer included in the epidemiological bulletin. Martinique was classified as Level 3 since 20 January 2016. Parts of French Guiana were classified as Level 3 on 22 January 2016 and 1 April 2016, Guadeloupe was classified as Level 3 since 28 April 2016.

^oOn 9 December a joint publication between the National Institute of Health of Colombia, the US-CDC National Center on Birth Defects and Developmental Disabilities and the Colombia Ministry of Health reported that between 31 January and 12 November 2016, a total of 147 microcephaly cases in fetuses and infants had laboratory evidence of Zika virus infection by real-time reverse transcription-polymerase chain reaction (RT-PCR) or immunohistochemistry.

^pAfter retrospective review by Ecuador Ministry of Public Health, only laboratory-confirmed cases were included in the confirmed Zika cases for Ecuador; previously reported non-laboratory-confirmed cases were included in the suspected Zika cases as of 18 August; Data is consistently modified as Ecuador reviews and integrates retrospective data.

^qAfter retrospective review, laboratory-confirmed cases was adjusted by the Venezuela (Bolivarian Republic of) IHR National Focal Point as of 25 August 2016.

^rBrazil Ministry of Health case definition for confirmed cases of congenital syndrome associated with Zika virus infection includes confirmed and probable cases per PAHO's case definition. As of EW 50 of 2016, 469 cases were confirmed for Zika virus by laboratory criteria. Information on Suspected and confirmed Zika cases is available at: <http://portalsaudef.saude.gov.br/images/pdf/2016/04/outubro/18/2016-029-Dengue-publicacao-n-34.pdf>

^sAs of 11 November, suspected Zika cases were adjusted by the Brazil Ministry of Public Health after retrospective review.

^tAs of 23 December 2016, two cases of congenital syndrome in Argentina, whose mothers acquired the Zika infection in Bolivia, were initially classified as confirmed cases by the Argentina Ministry of Health and then reclassified as probable cases. http://www.msal.gov.ar/images/stories/boletines/boletin_integrado_vigilancia_N338-SE48.pdf

^uhttp://www.msal.gov.ar/images/stories/boletines/boletin_integrado_vigilancia_N339-SE50.pdf

^vAs of 29 December 2016, the number of suspected cases decreased based on the modification by the Paraguay Ministry of Health

^wAs of 29 December 2016, the number of suspected cases decreased based on the modification by the Anguilla Ministry of Health and Social Development

^xThe data provided herein is the sum of cases reported for Bonaire (60), Sint Eustatius (16) and Saba (9).

^yAfter retrospective review, suspected cases were adjusted by the Grenada Ministry of Health as of 13 October 2016

^zPer information shared by the Netherlands IHR NFP to PAHO/WHO, the confirmed Zika cases was adjusted for Sint Maarten.
