Trinidad and Tobago Ministry of Health notified 17 cases of confirmed congenital syndrome associated with Zika virus ... between EW 32 of 2015 and EW 33 of 2017, of which 10 correspond to new cases notified between EW 1 and EW 33 of 2017.

In addition to the 5 reported cases of congenital syndrome, on 8 June 2017, Santé publique France reported 16 fetuses with cerebral malformations of mothers infected with Zika.

In addition to the one reported case of congenital syndrome, on 9 June 2017, Santé publique France reported 18 fetuses with cerebral malformations of mothers infected with Zika.

The difference between the number of cases diagnosed between 11 September 2017 and 20 cumulative confirmed cases of congenital syndrome associated with Zika virus infection, is due to a change in the case definition of microcephaly by the Ministry of Health of France.

The reported number of suspected cases of Zika are estimates. According to Santé publique France, the estimated number of suspected cases is the sum of the number of visits recorded by the Decentralized Centers of Prevention and Care (CDPS) and the number of suspected cases diagnosed and notified to the CDPS.

The difference between the number of reported cases of suspected (7639) and confirmed cases (1982) of Zika reported by 26 October 2017 with respect to the number of suspected (7635) and confirmed cases (1994) reported by 02 November 2017 is due to a retrospective adjustment of data by the Ministry of Health of Paraguay.
