The cumulative number of reported cases varies among territorial units, which is one of the reasons why the number of Zika cases and congenital syndrome associated with Zika virus varies among countries and territories in the Americas. The data presented in this document is based on reports received by Member States and transparently disseminated through official and peer-reviewed sources. The data should be used with caution when interpreting and analyzing this information, as it includes information reported by various health authorities. The number of Zika cases and congenital syndrome associated with Zika virus varies among countries and territories in the Americas.
