*Congenital Rubella infection; (a) Provisional data.
...No report received
The H1 genotype was identified in Mongolia and Japan. The most frequent genotypes B3, D4, D8, D9 and H1 were identified in India, respectively. The measles N gene was related to U: Unknown, I: Imported, CAC: Country-acquired case U: Unknown. The period from 2016 to 2018 in the last 52 weeks (2019, 2017, 2015, 2013) was investigated. The percentage of measles cases under investigation was less than 2%.
