For countries and territories which reported their first Zika case in 2015, the population is based on the average between 2015-2017. For countries and territories which reported their first Zika case in 2016, the population is based on the average between 2015-2017. For countries and territories which did not report Zika case see between 2015-2017, the population is based on the average between 2015-2017. In addition to the 2015-2017 and additionation to 2015-2017. In addition to the 2015-2017 and additionation to 2015-2017. In additionation to 2015-2

In the previous Zika update from the Guatemala Ministry of Public Health on 20 March 2017, a total of 59 cases of confirmed congenital syndrome associated with Zika virus infection were notified to PAHO / WHO (EW 32 of 2015 to EW 9 of 2017). On 25 May 2017, he Guatemala Ministry of Public Health notified 140 cases of confirmed congenital syndrome associated with Zika virus infection to PAHO/WHO (EW 32 of 2015 to EW 19 of 2017), of which 59 cases were newly reported cases between EW 14 and EW 18 of 2017.

On 30 August 2017, the Honduras Ministry of Health reported 10 confirmed and 379 suspected cases of Zika (EW 1 of 2017 and EW 33 of 2017), corresponding to a cumulative total of 308 confirmed and 32,385 suspected cases (EW 49 of 2015 to EW 33 of 2017). In addition, the Honduras Ministry of Health reported 6 cases of confirmed cases (EW 1 of 2016 to EW 33 of 2017). In

The difference between the number of reported confirmed cases of Zias from 10 August 2017 (345 cases) to 22 August 2017 (335 cases) is due to retropective adjustment of data by the Dominican Republic Ministry of Public Health and Social Assistance. The difference between the number of reported cases of confirmed congenital syndrome associated with Xia virus infection from 10 August 2017 (93 cases) to 21 August 2017 (85 cases) is due to a change in the criteria for the case definition of microcephaly by the Dominican Republic Ministry of Public Health and Social Assistance, which resulted in the retropective — calculation for cases.

The reported number of supported cases of Zia are estimates. According to Sarrie publique France, the estimated number of suspected cases is the sum of the number of visits recorded by the Decentralized Centers of Prevention and Care (CDPS) and the estimates of public visits and the case of congenital syndrome, on 3 June 2017, Sarrie publique France reported 18 fetures with created by the sentinel physician network.

In addition to the one reported case of congenital syndrome, on 3 June 2017, Sarrie publique France reported 18 fetures with created by the sentinel physician network.

addition to the 5 reported cases of congenital syndrome, on 8 June 2017, Santé publique France reported 16 fetuses with cerebral maiformations of mothers infected with Zika.

In addition, on 4 August 2017, the number of reported fetuses with cerebral malformations of mothers infected with Zika went from 22 to 21, based on the Santé publique France modification. The case reported by Santé publique France corresponds to a fetus with cerebral malformation of mothers infected with Zika.

The case reported by Sanie publique France corresponds to a lettus with creefold and formation or mortless infected with 72 km. 2 Past apublished in this table was provided by the half Minister de els Sanie Publique et de la Population (Apply) which reported 2.955 suspected and 5 confirmed cumulative cases between EW 1 and EW 32 of 2016. Note, on 17 February 2017, in a joint publication he U.S. Creentes for Disease Control and Prevention (EDC). Morbidity and Morality Weekly Report (MMWR) between the National Laboratory of Public Health of Health Orality of Level and EW 32 of 2016.
