# FIRST AUTOCHTHONOUS VECTOR-BORNE CASES

In epidemiological week (EW) 2 of 2016, the Bolivia International Health Regulations (IHR) National Focal Point (NFP) notified PAHO/WHO of the detection of the first autochthonous vector-borne case of Zika virus disease.

# **GEOGRAPHIC DISTRIBUTION**

Confirmed Zika cases by geographic distribution are only available for 2017. As of EW 12, autochthonous cases have been confirmed in all the departments except for Potosi. The department of Beni reported the highest incidence rate (60 cases per 100,000 population) up to EW 12 of 2017 (**Figure 2**).

## **TREND**

In 2017, the number of suspected and laboratory-confirmed Zika cases in Bolivia increased in EW 3, and reached a peak in EW 9 with 182 cases being reported (**Figure 1**). The number of cases reported between EW 1 and 12 of 2017, (1,352 suspected and confirmed cases) represents a large (210%) increase compared with the same period in 2016 (n=436). In the last 8 weeks (EW 5 to EW 12), an average of 137 suspected and confirmed cases per week was reported.

Between EW 1 of 2016 and EW 17 of 2017, there was a preponderance of females among suspected Zika cases in Bolivia for all age groups, except for the groups aged 0-4 years and  $\geq$  60 where the incidence rate was higher among males (**Figure 3**)<sup>2</sup>. This suggests that there could be a diagnostics bias towards females in an effort to reach pregnant women. The highest incidence rate was observed among females aged 20-39 years (20 cases per 100,000 population).

# **CIRCULATION OF OTHER ARBOVIRUSES**

As of EW 19 of 2017, a total of 6,672 suspected dengue cases (**Figure 4**) have been reported in the departments of Beni (n=2,710), Santa Cruz (n=2,204), Tarija (n=746), La Paz (n=499), Pando(n=217), Chuquisaca (n=159), Cochabamba (n=136) and Oruro (n=1)<sup>3</sup>. At the national level, a total of 764 dengue cases were confirmed up to EW 19 of 2017. In 2016, a total of 31,756 suspected cases (288 cases per 100,000) of dengue were reported in Bolivia, approximately 17% higher than the total number of suspected cases reported in 2015.<sup>4</sup>

With regard to chikungunya, a total of 2,664 suspected cases have been reported up to EW 19 of 2017 at the national level. In addition to the suspected cases, a total of 22 chikungunya cases were confirmed in the departments of Beni (n=10), Santa Cruz (n=7), Chuquisaca (n=2), La Paz (n=2) and Tarija (n=1) to date.<sup>3</sup> In 2016, a total of 20,785 suspected chikungunya cases were reported up to EW 52 of 2016.5

#### ZIKA VIRUS DISEASE IN PREGNANT WOMEN

Between EW 44 of 2016 and EW 12 of 2017, a cumulative total of 41 confirmed cases of Zika virus infection in pregnant women were reported by Bolivia national autorithies.<sup>1</sup>

#### ZIKA COMPLICATIONS

# ZIKA-VIRUS-ASSOCIATED GUILLAIN-BARRÉ SYNDROME (GBS)

As of EW 46 of 2016, one case of Guillain-Barré syndrome (GBS) associated with Zika virus infection was confirmed in the department of Santa Cruz. The patient has since died.<sup>6</sup>

#### CONGENITAL SYNDROME ASSOCIATED WITH ZIKA VIRUS INFECTION

As of EW 12 of 2017, the Bolivia Ministry of Health (MoH) reported 14 laboratory-confirmed cases of microcephaly associated with Zika virus infection.<sup>7</sup>

### **DEATHS AMONG ZIKA CASES**

As of EW 12 of 2017, no deaths among Zika cases have been reported the Bolivia health authorities. 1

## **NATIONAL ZIKA SURVEILLANCE GUIDELINES**

The Bolivia Ministry of Health national guideline for management of Zika virus infection is available at: <a href="https://www.minsalud.gob.bo/images/Documentacion/dgss/Epidemiologia/DENGUE-Chik-Zika/Guia%20final%20de%20Zika.pdf">https://www.minsalud.gob.bo/images/Documentacion/dgss/Epidemiologia/DENGUE-Chik-Zika/Guia%20final%20de%20Zika.pdf</a>

# LABORATORY CAPACITY

The diagnosis of Zika virus is performed by molecular detection (real time RT-PCR) at the *Centro Nacional de Enfermedades Tropicales* (CENETROP), Ministry of Health. For its diagnoses, CENETROP also uses serologic testing based on ELISA assays (IgM).

## **INFORMATION-SHARING**

At the time of this report, the latest available Zika virus information shared by the Bolivia IHR NFP was from EW 12 of 2017 and published by the Bolivia Ministry of Health was from EW 19 of 2017.
