FIRST AUTOCHTHONOUS VECTOR-BORNE CASES

In epidemiological week (EW) 47 of 2015, Guatemala health authorities reported the detection of the first laboratory-confirmed case of Zika virus in the Zacapa Department.

GEOGRAPHIC DISTRIBUTION

Between EW 40 of 2015 and EW 45 of 2016, a total of 3,290 suspected and 784 confirmed cases have been reported in Guatemala.2 As of EW 45 of 2016, Guatemala has reported suspected cases of Zika in 21 out of 22 departments. Totonicapán Department has not reported any Zika cases. The highest cumulative incidence rates have been recorded in the departments of Santa Rosa (121 cases per 100,000 population), Zacapa (116 cases per 100,000), Chiquimula (93 cases per 100,000), and El Progreso (41 cases per 100,000) (Figure 2).2

TREND

A steady increase in the number of Zika cases was observed from EW 46 of 2015 to EW 6 of 2016, when a peak with 222 cases was reported. Since then, weekly cases have decreased. Between EW 35 and EW 40, an average of 46 cases per week has been reported in Guatemala (Figure 1).

Above-average Zika incidence rates were observed in adults aged 20 to 39 years (Figure 3).²

CIRCULATION OF OTHER ARBOVIRUSES

Between EW 1 and EW 45 of 2016, a total of 8,409 dengue cases (51 cases per 100,000) have been reported in Guatemala. Over the same period, in 2015, 16,967 cases were detected (105 cases per 100,000).²

In regard to chikungunya, from EW 1 to EW 45 of 2016, a total of 4,992 cases (30 cases per 100,000) have been registered in the country. During the same period, in 2015, a total of 29,554 cases were identified (183 cases per 100,000).²

ZIKA VIRUS DISEASE IN PREGNANT WOMEN

As of EW 45 of 2016, the Guatemala Ministry of Public Health and Social Assistance has reported 965 pregnant women with suspected Zika virus disease, including 275 confirmed cases.¹

ZIKA COMPLICATIONS

ZIKA-VIRUS-ASSOCIATED GUILLAIN-BARRÉ SYNDROME (GBS)

As of EW 40 of 2016, 54 cases of Guillain-Barré syndrome (GBS) have been reported, including 13 cases confirmed for Zika virus (Figure 4).¹ The incidence rate of GBS in 2016 (as of EW 40) is higher than the rates of GBS reported between 2011 and 2015 (Figure 5).

CONGENITAL SYNDROME ASSOCIATED WITH ZIKA VIRUS INFECTION

As of EW 40 of 2016, 15 confirmed cases of congenital syndrome associated with Zika virus infection have been reported by the Guatemala health authorities.¹

DEATHS AMONG ZIKA CASES

As of EW 49 of 2016, no deaths among Zika cases have been reported by the Guatemala health authorities.
NATIONAL ZIKA SURVEILLANCE GUIDELINES

The Ministry of Public Health and Social Assistance published a protocol for the epidemiological surveillance, prevention, control and care of Zika virus disease. The protocol is available at:

http://epidemiologia.mspas.gob.gt/files/Protocolo%20Zica.pdf

LABORATORY CAPACITY

The diagnosis of Zika virus is performed by molecular detection (real time RT-PCR) by the Grupo Virología, Laboratorio Nacional de Salud at the Ministry of Health of Guatemala. Currently, the laboratory is also implementing the serology diagnosis based on ELISA IgM detection as well as the PCR multiplex system from the United States Centers for Disease Control and Prevention (Trioplex).

INFORMATION-SHARING

The Guatemala Ministry of Public Health and Social Assistance publishes a weekly epidemiological bulletin. At the time of this report, the latest information available was from EW 45 of 2016.
