**FIRST AUTOCHTHONOUS VECTOR-BORNE CASES**

In epidemiological week (EW) 37 of 2016, the Saint Kitts and Nevis Ministry of Health notified PAHO/WHO of the detection of the first confirmed cases of autochthonous vector-borne transmission of Zika virus.

**GEOGRAPHIC DISTRIBUTION**

Laboratory-confirmed cases have been detected on the larger island of Saint Kitts out of the two islands.

**TREND**

Following the emergence of Zika virus in Saint Kitts and Nevis, the number of cases increased up to EW 39 of 2016, after which a declining trend was observed (Figure 1). On average, 16 cases per week have been reported in the last eight weeks for which information is available (EW 42 to EW 49 of 2016).¹

¹ Reported to PAHO/WHO by the Saint Kitts and Nevis International Health Regulations (IHR) National Focal Point (NFP) on 20 December 2016.
CIRCULATION OF OTHER ARBOVIRUSES

As of EW 46 of 2016, 136 probable dengue cases (261 cases per 100,000) had been reported. In 2015, 5 probable dengue cases (5 cases per 100,000), including one confirmed case, were detected up to EW 24.

In regard to chikungunya, a total of 28 suspected cases (54 cases per 100,000) were detected in 2016. In 2014, 432 suspected and 27 laboratory-confirmed cases (cumulative incidence rate of 900 cases per 100,000) were registered up to EW 44.

ZIKA VIRUS DISEASE IN PREGNANT WOMEN

As of EW 5 of 2017, the Saint Kitts and Nevis Ministry of Health, Community Development, Gender Affairs, and Social Services has not reported any Zika virus infection in pregnant women.

ZIKA COMPLICATIONS

ZIKA-VIRUS-ASSOCIATED GUILLAIN-BARRÉ SYNDROME (GBS)

As of EW 5 of 2017, no cases of Zika-virus-associated Guillain-Barré syndrome (GBS) or other neurological syndromes have been reported by Saint Kitts and Nevis health authorities.

CONGENITAL SYNDROME ASSOCIATED WITH ZIKA VIRUS INFECTION

As of EW 5 of 2017, no cases of congenital syndromes associated with Zika virus infection have been reported by Saint Kitts and Nevis health authorities.

DEATHS AMONG ZIKA CASES

As of EW 5 of 2017, no deaths among Zika cases have been reported by Saint Kitts and Nevis health authorities.

NATIONAL ZIKA SURVEILLANCE GUIDELINES

No information is available on the national guidelines for Zika surveillance.

LABORATORY CAPACITY

Samples from suspected Zika cases are sent to Caribbean Public Health Agency (CARPHA) for laboratory molecular conformation (real-time RT-PCR).

INFORMATION SHARING

In EW 37 of 2016, the Saint Kitts and Nevis Ministry of Health reported the first autochthonous Zika virus disease cases. At the time of this report, the latest information provided was from EW 49 of 2016.
