- (1) Commonly used vaccine product abbreviations shown in this list, instead of the actual full technical names and descriptions. In case of any questions and clarification needs, please contact: RFV@paho.org
- (2) These are indicative FCA prices as a high level reference and they do not include international logistics, insurance and other operational costs. The actual price and other relevant costs will be clarified in procurement documents like price estimates. The indicative prices are rounded to two decimal places and in some instances, intervals provided.
- (3) Please note that there is only one size of WHO pre-qualified BCG products available: Vial x 1 ml. For target group given at birth that would represent 0.05 ml injections with 20 dose in a vial. If BCG vaccine to be given over 1 year old, then the injection volume would be 0.1 ml with 10 dose in the size same vial.
- (4) These indicative prices include international freight and insurance costs.
- (5) Please note that these products represent the same Moderna vaccine vial size with 2.5 ml volume. The suggested per dose volume to be administered (either 0.5 ml or 0.25 ml) depends on the age group.
- (6) Product indications for different target groups and prices would be made available up on request from the interested Member States by RRF. Please also note that more details are available in the Member State Demand Planning Portal.
